**16** ATTICA. Athens, AR, Tetradrachm. 515 BCE - 482 BCE Obv: Athena head of right; archaic style. Rev: ΑΘΕ. Owl standing, right; head facing, behind olive sprig. The first era of Athenian owls, coins struck during the Archaic period of Greek art, began about 515 B.C. and continued through the early fifth century. These issues are characterized by their thick, compact planchets and a crude, but visually striking style. Athena, wearing a crested helmet, appears for the first time on the obverse as a crudely executed bust. Athena and her owl are marked by almost cartoonish qualities in both appearance and proportion. Because of this early style, which is also evident in our impressive specimen (Seltman Group E, 'Paeonian mint'), Seltman has argued that such tetradrachms were issues from mints in the Attic or Thracian hinterlands, or Paeonia, where there were less skilled engravers. But this suggestion was disproved. Ref: Asyut Hoard Group VI; HGC 4, 1591. Condition: EF. Weight: 16,74g Diameter: 20,4mm

Rev. •REC•/TAPXH S / KATEΠAN / ΤΙ ROVP/•TZH• in five lines Cheynet, in his article on the Armenian or Arab Bourtzes family, published two seal types of a Michael Bourtzes dating to the second third of the 11th century. The oldest type styles him anthypatos and stratelates. The other type mentions him being magistros, vestes, vestarches and strategos of Anatolikon. Cheynet attributes these seals to the homonymous general mentioned by John Skylitzes during the reign of Michael VI (1056-1057). He was a partisan of Isaac I Comnenus (1057-1059), who promoted him to magistros and awarded him the command of Anatolikon. Our seal, bearing the same dignity of vestarches, but with a different military command, may belong to this individual as well. However, the name Michael was very well-liked in the Bourtzes family, and it is also possible that it belongs to yet another family member. Condition: Very fine. Weight:11,73g Diameter:24,5mm
