230 Greek. Bactrian Kingdom. Eukratides I the Great, Tetradrachm (circa 170-145 BC) (Silver, 16.99 gr, 33 mm). HGC 12-132, Bopearachchi 8b, Mitchiner 179a, SNG ANS 485. One of the most iconic ancient portrait styles, with a portrait of undeniable power, rendered in Fine Style detail in high relief. Flashes of golden toning add further dimensionality to the muscular obverse portrait. The full beaded border present completes the desirability of this magnificent example. Eukratides I, a usurper who seized power, utilized coin imagery to project his authority. The reverse of his coin depicts the Dioskouroi, symbolizing martial strength, with an inscription asserting his dominance as "the great King." On the obverse, Eukratides is portrayed as a heroic nude bust, armed and poised, wearing a bull-horned helmet linked to Seleucid heritage. This numismatic artistry reflects the influence of Hellenistic culture, aligning Eukratides with Greek ideals of leadership and civilization. Such coins, crafted by skilled artists, reinforced the Greek identity of the Bactrian kings and their distinction from local rulers. Eukratides' portrait style influenced later eastern and Roman coinage, underscoring the enduring impact of Hellenistic cultural symbols.

271 French President Valery Giscard d'Estaing Coin Cabinet (circa 1680) Rare and Elegant "Bird" Cabinet in Marquetry The front opens with various doors and drawers richly adorned with intricate marquetry decorations of birds set in architecturally designed landscapes. The molded top opens with a lid, while the sides are decorated with large palatial scenes populated by animals and exotic birds. The interior of the doors contains hidden drawers. The desk base, in the Louis XVI style, consists of a rectangular desk veneered in fruitwood and blackened wood. Work from the 17th century, originating from Alsace, Switzerland, or Augsburg in Germany, showcasing exceptional craftsmanship. Restored around 1848 and most recently in 2024 to revive its original charm and patina. Rare et élégant Cabinet dit "aux oiseaux" en marqueterie. Ouvrant en façade à divers vantaux et tiroirs richement ornées d'un riche décor marqueté de volatiles dans des paysages architecturés, le dessus à doucine ouvrant par un couvercle, les côtés ornés de larges scènes palatiales peuplées d'animaux et d'oiseaux exotiques, l'intérieur des vantaux composé de tiroirs secrets. Le bureau piètement rapporté de style Louis XVI, formé d'un bureau rectangulaire en placage de bois fruitier et de bois noirci. Travail XVIIIe siècle, Alsace, Suisse ou Augsburg en Allemagne. D'une finesse exceptionnelle. Restauration vers 1848. Dernière restauration en 2024 pour lui redonner son goût et jus d'antan. From French President Valery Giscard d'Estaing's Hotel Particulier Valery Giscard d'Estaing (1926-2020), also known as simply Giscard or VGE, was a French politician who served as President of France from 1974 to 1981. 73 x 108.5 x 41 cm (cabinet) 145 x 118.5 x 47.5 cm (desk base)

282 Belgium. Brabant. Charles V (1506-1555), Gulden (Florin Karolus d'argent) (1544-1548) (Antwerp mint) (Silver, 21.72 gr, 37 mm). VGH 187-1. Extremely Fine. Probably one of the best preserved example. A magnificent portrait of fine style struck in high relief and a finely detailed composition. Wonderful gray patina. In the late 15th century, new silver mines in Tyrol and Saxony enabled the minting of large silver coins (Guldengroschen), later widely used in the Holy Roman Empire as Taler. Spain's New World silver influx only became significant after 1545-1546. Charles V introduced a large silver coin in the Netherlands in 1544, equivalent to a gold karolus florin, but it failed to gain public favor and was discontinued after a brief period.

4'000

283 Belgium. Brabant. United Belgian States (1790), 1 Florin 1790, Type I (Brussels mint) (Silver, 9.25 gr, 30 mm). KM 48. Extremely Fine, traces of old cleaning.

289 Belgium. Pair of Tin Uniface The Peace Treaty between Spain and France 1660 (Tin, 70.95 gr, 55 mm). Van Loon 1660-6. PCGS SP62 The Treaty of the Pyrenees, signed on November 7, 1659, marked the end of a prolonged conflict between France and Spain that had been part of the broader Thirty Years' War (1618-1648). Although the Thirty Years' War officially ended with the Peace of Westphalia in 1648, France and Spain continued fighting until this treaty brought their hostilities to a close. Negotiated on Pheasant Island, a small neutral territory in the Bidasoa River between the two nations, the treaty symbolized a decisive shift in European power dynamics. It ceded Roussillon and northern Cerdanya to France, consolidating French control over parts of modern-day southern France, and parts of Artois, Hainaut, and other territories in the Low Countries. Spain retained control of the Southern Netherlands, but the loss of these territories significantly weakened its influence. The treaty also included a marriage agreement between Louis XIV of France and Maria Theresa of Spain, aimed at cementing peace. However, the dowry disputes arising from this marriage later became one of the factors leading to the War of Devolution (1667-1668). The Treaty of the Pyrenees is a critical moment in European history, as it signaled the decline of Spanish dominance and the rise of France as a major power under Cardinal Mazarin and Louis XIV, laying the groundwork for the later "Age of Absolutism." PCGS Genuine (AU Details, Cleaned) A study, based on the hypothesis that these coins were struck using the same die, focuses on a defect in the signature. This defect, referred to as "type 2," is characterized by the absence of a dot after the "A," with a double "I," the first "I" being higher than the "M" and thinner. This defect could serve as a marker of authenticity. In fact, out of a total of 225 examined coins with a star, none displayed this defect. The study demonstrated that this defect only appears on starless coins. If the hypothesis is confirmed, it would provide an effective method for detecting authentic coins. The study also classified eight different types of signatures on the 1932 coins. Une étude, basée sur l'hypothèse que ces pièces ont été frappées avec un même coin, se concentrent sur un défaut dans la signature. Ce défaut, qualifié de "type 2", se caractérise par l'absence d'un point après le "A", avec un double I, le premier "I" plus haut que le "M" et plus mince. Ce défaut pourrait être un marqueur d'authenticité. En effet, sur un total de 225 pièces à étoile examinées, aucune ne présente ce défaut. Cette étude a démontré que ce défaut n'apparaît que sur les pièces sans étoile. Si cette hypothèse se confirme, elle fournirait un moyen efficace de détecter les monnaies authentiques. Cette étude aura également permis de classifier huit types différents de signatures sur les pièces de 1932. Tijdschrift voor numiamtiek (1980). LA PIECE BELGE DE CINQ CENTIMES AU MILLESIME 1932. 388 Belgium. Leopold III (1934-1951), Concours of 1934, Gold 20 Francs by Theunis (Gold, 11.16 gr, 28 mm). Uncirculated. A New 20 Franc Coin Bearing the Effigy of King Leopold III (1934) Following the accidental death of King Albert on February 17, 1934, the effigy of the late sovereign, which appeared on the silver 20 franc coins that had been issued the previous year, had to be replaced by that of his son, King Leopold III. On March 1, 1934, the Director of the Royal Mint, Hector Verhaeghe, proposed to the Minister of Finance either to commission Godefroid Devreese, the creator of King Albert's effigy, to design a new model, or to invite all Belgian artists to create an effigy of the new sovereign and a new reverse for the silver 20 franc coin. By March 3, 1934, the Minister had already chosen the latter option, and most newspapers published a call for entries for this design competition on March 15, 1934. This call invited participating artists to submit a plaster model along with a sketch or photo of their project by April 15, 1934. A prize of 1,000 francs was promised for the five best designs, with a reward of 10,000 francs for the artist whose model would be selected. Despite strong protests from artists regarding the short execution deadlines, 35 artists still participated in the competition. Unfortunately, the Mint archives do not contain illustrations of all the submitted projects, and it is also difficult to confirm if all candidates indeed submitted their work. Since the projects were later exhibited in the Mint Museum, some artists may have requested to retrieve their entries. We can confirm that the following artists participated in the competition: Georges Adelaere, Achiel Bentos, Auguste Bija, Armand Bonnetain, Jean Canneel, Marc Colmant, Eugène De Bremaecker, Pierre De Soete, Donatien De Zeine, Louis Dupont, Auguste Guaisnet, P. Libert, Alfons Mauquoy, Herman Pick, J.B. Ponsard, Marcel Rau, Leon Sarteel, Pierre Theunis, Jules Van de Veegaete. On April 27, 1934, a jury chaired by Viscount Alois Van de Vyvere selected four projects: those by Alfons Mauquoy, Armand Bonnetain, Pierre Theunis, and Marcel Rau. These artists were then asked to finalize their designs according to the instructions from the jury and the Royal Court. On October 1, 1934, the jury met again and unanimously chose Marcel Rau's project, although he was required to make some adjustments to his design. In addition to the promised prize of 1,000 francs, Bonnetain and Theunis each received an additional remuneration of 1,000 francs, while Mauquoy received an additional 2,500 francs. Marcel Rau received a total of 11,000 francs. On December 24, 1934, the first new coins were struck in

PCGS PR67 CAM Struck to commemorate the 150th Anniversary of Independence. Flemish obverse muled with french reverse, mintage estimated at 30 pieces. Minted illegally, just over half was returned. With original box of issue. The Ministry of Finance is organizing a design competition open to all Belgian artists for the creation of a type of coin issued on the occasion of the 150th anniversary of Belgium's independence. They had to provide in their drawings five free places to accommodate the effigy of the five kings of our dynasty. Wieslaw Bartolomiej Bielyszew's project won first prize. After some improvements to his project, it was engraved by Paul Huybrechts. The following five effigies were chosen to be engraved in a medallion on the obverse: The effigy of Leopold I by Leopold Wiener, Leopold II by Franz Vermeylen, Albert I by Godefroid Devreese, Leopold III by Marcel Rau and Baudouin I by Harry Elstrom. Le ministère des Finances organise un concours de dessin ouvert à tous les artistes belges pour la création d'un type de pièce de monnaie émise à l'occasion de 150e anniversaire de l'indépendance de la Belgique. Ils devaient prévoir dans leurs dessins cinq emplacements libres pour accueillir l'effigie des cinq rois de notre dynastie. Le projet de Wieslaw Bartolomiej Bielyszew remporta le premier prix. Après quelques améliorations apportées à son projet, celui-ci fut gravé par Paul Huybrechts. Les cinq effigies suivantes furent choisies pour être gravées en médaillon sur l'avvers : L'effigie de Leopold I par Leopold Wiener, Leopold II par Franz Vermeylen, Albert I par Godefroid Devreese, Leopold III par Marcel Rau et Baudouin I par Harry Elstrom.

409 Bolivia. Republic (1825-2009), 8 Soles 1834 PTS LM (Potosi mint) (Silver, 25.94 gr, 39 mm). KM 97. Extremely Fine. Following Bolivia's independence, the Constituent Congress approved a law providing for a national currency on November 20, 1826. The Casa de Moneda de Potosí began minting the new currency in 1827. at the rate of 10 dineros 20 granos (24 granos = 1 dinero - 12 dineros = pure silver under the old colonial system). Equivalent to 902.7 thousandths of pure silver. The inscriptions on the edge are a tribute to Antonio José de Sucre's victory at the Battle of Ayacucho in 1824, which secured the independence of the Spanish colonies in South America.

100

410 Brazil. Federative Republic (1967-date), Royal Portuguese Reading Room of Rio de Janeiro 1987 (Silver, 114.26 gr, 60 mm). Extremely Fine, small testing mark on edge. The Royal Portuguese Reading Room (Real Gabinete Português de Leitura) in Rio de Janeiro is one of the world's most stunning libraries, blending architectural splendor with a rich literary heritage. Established in 1837 by Portuguese immigrants, it serves as a testament to the enduring cultural ties between Brazil and Portugal. The library's current building, completed in 1887, is an exquisite example of neo-Manueline architecture, a style inspired by Portugal's Age of Discovery. Its façade, designed by architect Rafael da Silva e Castro, resembles the Jerónimos Monastery in Lisbon, featuring intricate stone carvings and maritime motifs. Inside, the Reading Room dazzles with towering wooden bookshelves that rise to the ceiling, filled with more than 350,000 volumes. A magnificent stained-glass skylight bathes the space in natural light, enhancing the serene and scholarly ambiance. The collection includes rare books, manuscripts, and works by iconic Portuguese authors, making it a treasure trove for researchers and literature enthusiasts. Beyond its historical and architectural importance, the Royal Portuguese Reading Room remains a vibrant cultural hub, hosting literary events and preserving the legacy of Portuguese literature in Brazil. Recognized as a national heritage site, it continues to captivate visitors from around the globe with its timeless beauty and cultural significance.

413 Cocos (Keeling) Islands - Clunies-Ross V (1946-1978), Set of 7 coins, 5 Cents to 5 Rupees 1977. KM X 1 to X 7. Uncirculated. The Cocos (Keeling) Islands, a remote Indian Ocean atoll, were ruled for over a century by the Scottish Clunies-Ross family, who established a private dynasty in 1827. Settling the uninhabited islands, John Clunies-Ross I created a feudal society centered on coconut plantations, bringing Malay workers and controlling all aspects of island life. By the mid-20th century, under John Cecil Clunies-Ross V, the family's rule came under scrutiny as modern governance took hold. In 1978, the Australian government purchased the islands, ending the family's hereditary control.

100

426 France. Directory (1795-1799), Napoleon Bonaparte, Italian Campaign 1796, Ferrier (Bronze, 33.40 gr, 42 mm). Hennin 766. Very Fine. The Italian Campaign of 1796, led by Napoleon Bonaparte, was a pivotal moment in both his career and European history. At just 27 years old, Napoleon was entrusted with the command of the French Army of Italy during the French Revolutionary Wars, a time when France was embroiled in conflict with multiple European powers, including Austria and Sardinia. Napoleon's bold strategy and military genius turned the campaign into a resounding success, despite the French forces being outnumbered and poorly equipped compared to their adversaries. His leadership was characterized by rapid maneuvering, audacious tactics, and the ability to inspire his troops. By winning key battles such as the Battle of Montenotte, the Battle of Lodi, and the Battle of Arcole, Napoleon was able to decisively defeat the Austrians and their allies, forcing them to retreat from northern Italy. The campaign not only resulted in significant territorial gains for France, including the conquest of Lombardy and other parts of northern Italy, but it also helped to solidify Napoleon's reputation as one of the greatest military leaders in history. The Treaty of Campo Formio, signed in 1797, officially ended the conflict and secured French dominance in Italy, with Austria ceding several territories to France. The Italian Campaign was a key moment in Napoleon's rise to power. It not only demonstrated his military prowess but also laid the foundation for his eventual ascension to the title of Emperor of France. The campaign's success enhanced his popularity and influence, marking the beginning of a new era in European history. Restrike with BRONZE countermark on the edge.

100

439 France. Napoleon I (1804-1814), Canal de Mons à Condé (1813), Brenet (Silver, 38.69 gr, 40.50 mm). Julius 2737. Extremely Fine, traces of old cleaning, minor edge nick. The Canal de Mons à Condé was a significant infrastructure project during the reign of Napoleon Bonaparte, designed to improve transportation and enhance military logistics. Spanning between Mons in present-day Belgium and Condé-sur-l'Escaut in northern France, the canal was part of Napoleon's broader efforts to modernize France and its empire, particularly its military capabilities. The canal was envisioned as a way to link the Sambre and Escaut rivers, facilitating the movement of goods and troops between France and the regions of the Low Countries. Napoleon recognized the strategic importance of such waterways, both for economic development and for ensuring military mobility during the Napoleonic Wars. The canal would provide a reliable route for transporting supplies, troops, and artillery, essential for the movement of French forces across northern Europe. Construction of the Canal de Mons à Condé began in 1804, but it was not completed until after Napoleon's fall from power. While the canal's completion did not fully match Napoleon's grand vision due to political and financial challenges, it remained an important regional transportation route throughout the 19th and early 20th centuries. Napoleon's push for projects like the Canal de Mons à Condé reflected his broader ambitions to improve France's infrastructure, strengthen its economy, and ensure military dominance. Though not as widely known as his military campaigns, the canal exemplified his strategic foresight in infrastructure development.

Abbad ibn Muhammad, AL-MUTADID was the last ruler of the Taifa of Seville (1069-1091) and a member of the Abbasid dynasty. The Taifa of Seville started as a small, weakly defended territory comprising parts of current Spanish provinces of Seville, Huelva and Cadiz, but quickly emerged as the most powerful taifa kingdom of the time, after its rulers began pursuing a policy of expansion. After several military campaigns, the kingdom achieved dominance over all of Western Andalusia and Murcia, gradually absorbing the taifas of Badajoz, Algeciras, Granada and Málaga, Mértola (1044), Huelva (1051), Algarve (1051), Niebla (1053) Algeciras (1055), Silves (1063), Ronda (1065), Morón (1066), Carmona (1067), Arcos (1069) and even Córdoba itself (1070, lost in 1075 to Toledo but regained in 1077). The kingdom reached its largest territorial extent in 1078 with the capture of Murcia in 1078.

509 New Caledonia. French Dependency (1853-1946), 5 Francs (Gomen) 1882 (Copper-nickel, 9.39 gr, 27 mm). KM X Tn4, Lecomte 9. About Uncirculated. The Société Franco-Australienne Gomen Digeon & Co. was a French company active in New Caledonia in the 19th century, known for its role in the development of the region's economy and its involvement in various commercial activities. The company was founded by French entrepreneurs, including Gomen and Digeon, and was primarily focused on trade and the exploitation of natural resources in New Caledonia, a French territory in the Pacific Ocean. One of the company's notable contributions was its role in the nickel mining industry, which became a cornerstone of New Caledonia's economy in the late 19th and early 20th centuries. The company, through its various ventures, helped pave the way for the exploitation of the island's rich mineral resources.

400

522 Sierra Leone. Sierra Leone Company (1791-1807), 1 Dollar 1791, Type 100 (Soho mint) (Silver, 25.75 gr, 36 mm). KM 6. Extremely Fine. The Sierra Leone Company issue refers to a series of coins struck at James Watt's Birmingham Mint for use in the British colony of Sierra Leone. These coins were specifically produced for circulation in Sierra Leone, a colony that was established in West Africa after the American Revolutionary War. During the American Revolutionary War (1775-1783), many enslaved Africans fought alongside the British in exchange for promises of freedom. These individuals were known as Black Loyalists. At the end of the war, the British transported thousands of Black Loyalists, as well as other African Americans who had escaped slavery, to Nova Scotia in Canada. In 1787, a plan was devised to establish a settlement for these Black Loyalists in Sierra Leone, with the intention of creating a free and self-governing colony for freed African Americans. The Sierra Leone Company was established to oversee the settlement and facilitate the transportation and establishment of the Black Loyalists in Sierra Leone. As part of its efforts to develop a functioning economy in Sierra Leone, the Sierra Leone Company issued its own currency. These coins were struck at James Watt's Birmingham Mint in England. The coins featured various denominations, including halfpenny, penny, and twopence. The currency issued by the Sierra Leone Company was primarily used in the colony for local trade and commerce. It provided a means of exchange for the settlers and contributed to the development of a monetary system within the colony. The colony of Sierra Leone faced numerous challenges, including disease, conflicts with indigenous tribes, and political unrest. Over time, the Sierra Leone Company relinquished control of the colony, and in 1808, Sierra Leone became a British Crown Colony. The coins issued by the Sierra Leone Company are historically significant as they represent an early attempt to establish a functioning economy and monetary system in Sierra Leone. They also serve as a reminder of the complex history of the colony, which was founded as a refuge for Black Loyalists and became an important settlement in the abolitionist movement in the 19th century.

537 Tobago, 5 1/2 Bit ND (1798), Type I (Silver, 13.91 gr, 34 mm). KM unlisted, Pridmore unlisted. Fine, holed. The first dollar consisted of various cut or holed Spanish dollars and other Spanish colonial coins. The dollar was subdivided into bits (worth 9 pence). The first series of coins was produced between 1791 and 1798 in denominations of 1-1/2, 5-1/2 and 11 bits, with the 5-1/2 bits holed 4 reales coins, the 11 bits holed 8 reales coins and the 1-1/2 bits the plugs from producing the 5-1/2 and 11 bits coins. Authorization not traced, but is presumed near the end of 1798. The Holey Dollar issues of Dominica and Tobago appear to be quite similar, but in fact are distinctly different. The most significant of which is the side each coin was pierced from; Dominica from the reverse while those of Tobago were pierced from the obverse. Furthermore, it is now theorized that there are two distinct types from Tobago; Type I, crude elongated and slanted crenations (Stack's Bowers Galleries, January 2023 NYINC Auction, Lot 21468) and the Type II, with neat nearly vertical crenations (Stack's Bowers Galleries, January 2023 NYINC Auction, Lot 21377). Plug removal by piercing the center of the coin consisting of 14 or 15 crenation's. Pridmore collection not including 5-1/2 bits (Half dollar) coins, and the Byrne collection mentioned an example attributed to Dominica (Ray Byrne collection, Jess Peters, Sale 78 June 1975, Lot 1214). The 4 reales coin was pierce from the obverse and should be distinct as Type II from Tobago. PCGS founded their opinion based on the Ray Byrne's 4 Reales example from Dominica (which should be considered as "Type II" from Tobago), and denied to certified this coin, which we believe to be an earlier type "Type I" as it has been pierced from the obverse, with crude elongated and slanted crenations (as for the 8 Reales). If you are willing to bid on this lot, we encourage you the read our preliminary researches, and you should consider to conduct deeper researches. Applied to a 1776 PTS JR 4 Reales from Bolivia KM-54.
